

Misc

how do we make users want to use this app/ what is the main appeal - the more simple and efficient it is the more people will want it

exchange money? like venmo with connected users ~theres also cashapp and Paypal

Good or bad idea: A section where you can meet new friends virtually (almost like tinder but for friends/social media) - you can choose to be seen or not, like snap maps

What if the event coordinator can make a special section for their program and people there can share their information if they want virtually w/o having to be close.

are there built in app features that are "premium?" Like safety features etc - yes an no, I feel like safety features shouldn't be premium but we should include premium features for user appeal

is there a reward section? where they can earn badges after sharing "X" amount of times or networking with others

Very random: there could be a sort of game feature (optional) with a large event setting: it matches you with random people in the same are/event and you have to find each other - could be points system.

are there legal issues with any of the things we are sharing?

Method of Sharing

Users may want to connect their personal contacts with the app

search people and request their information?

can multiple share at once OR it has to be two people at a time?

Press button at the same time as someone else in the same location to share info?

Links to specific user social medias

Air dropping

what range do we want for the app - 1 mile? 5 mile?

businesses, chains, or corporations can use the app for sharing their contacts via searching. (their accounts are public)

Privacy Settings

Also have emergency button, in case of danger

privacy is restricted and requires the users permission to share social medias, number, email, etc.

what if the users don't want to share all of their social medias? **what about having an 'angel button' that shares fake data in awkward/creepy situations

Different setting for sharing: "Meeting new people" "Family" "Acquaintances" "Friends" "Professional"

what socials do we want to connect? snap, insta, tik tok, linked in, facebook, vsco, etc. what about email, phone numbers, etc? I feel like phone shouldn't be shared via this app but we could connect phone numbers to app - verification code

Try to be creative with the app

to for extra privacy, the application will ask permission to complete sharing

Options for the user to choose what to share with the person

Design

Have theme with colors to attract the users

Dark mode- i love dark mode

Do we have a color scheme for our brand/app?

name needs to be simple and catchy - having name will help to determine theme also

Easy to use

what type of button is it? is it customizable? are there different themes?

Each user account has a picture and their desired information

Name of the app?
